

EVOLUTION

Try to comprehend
That nothing exists
No matter, no light
No sound
A void so vast
Or a void so infinitely small
The paradox of time is real

Something changed
There is light
There is sound
There is matter

The very start of evolution
A beginning to all things of existence
An energy takes a path
Elements and reactions
Developing into the complexities of life
Senses happen
Hearing, smelling, feeling
Is there even a spirit

These are my thoughts
No one can see them
These are my thoughts
No one can hear them
These are my thoughts
No one can feel them - my thoughts

My kind is full of- my thoughts
Nothing artificial here - my thoughts
Just genuine intelligence- my thoughts
I am alive

These are my thoughts - my thoughts

What next for evolution
The beings we know fight for existence
From fight to flight
Foliage searching for sunlight
Individual thoughts can be created
Yet we are all from the same
That initial change that created
All existence
How will it end
How will it end
How will it end
